

# “Enhanced Galileo Green Lane platform”

–

*Alberto Fernández Wyttenbach*

# Previous “Galileo Green Lane” solution

- Technological solution to support the freight transport community, operational since the 1<sup>st</sup> wave of the pandemic
- Monitor the EU Green Lanes: max. 15 min. to cross borders
- Real-time visualization crossing time in 187 border points

*Problems remain in specific (and NEW) borders!*

New contractor\* selected at the end of 2021 aiming to develop a more ambitious solution and data by mid-2022

1. **Addition of new border crossings (in addition to the TEN-T map) and testing:** for instance, Western Balkans countries requested the addition of their main internal border crossings.
2. **Automatic PDF generation** of the daily reports to EC
3. **Addition of other points of interest (e.g. resting areas, refuelling stations):** Member States expressed interest to extend the crossings for other purposes, linked to monitoring of traffic in logistics hubs
4. **Addition of National Traffic Information Datasets:** they provide key information and are accessible on a national data point, typically operated by the police, and are easily accessible and integrated.
5. **Addition of Floating car data:** real-time traffic information retrieved from passenger cars and trucks through from private entities: Google Waze, HERE Technologies, INRIX,...
6. **Development of iOS app version** for Apple smartphones
7. **Develop an application interface (API)** in order to permit other relevant stakeholders to access and distribute Galileo Green Lane data
8. **Engagement activities** for border authorities, freight carriers and automotive clubs (passenger cars)

# Solution overview

- Microservices architecture: separate components deployed individually
  - ✓ Isolates functionality
  - ✓ Simplifies re-use and composition
  - ✓ Best technology for each purpose
  - ✓ Expandable
- Platform independent: integrates Open-Source components and ad-hoc code
  - ✓ Deployment on cloud or on premise
  - ✓ Based in Java stack
  - ✓ IA components in Python
  - ✓ Web applications in pure HTML

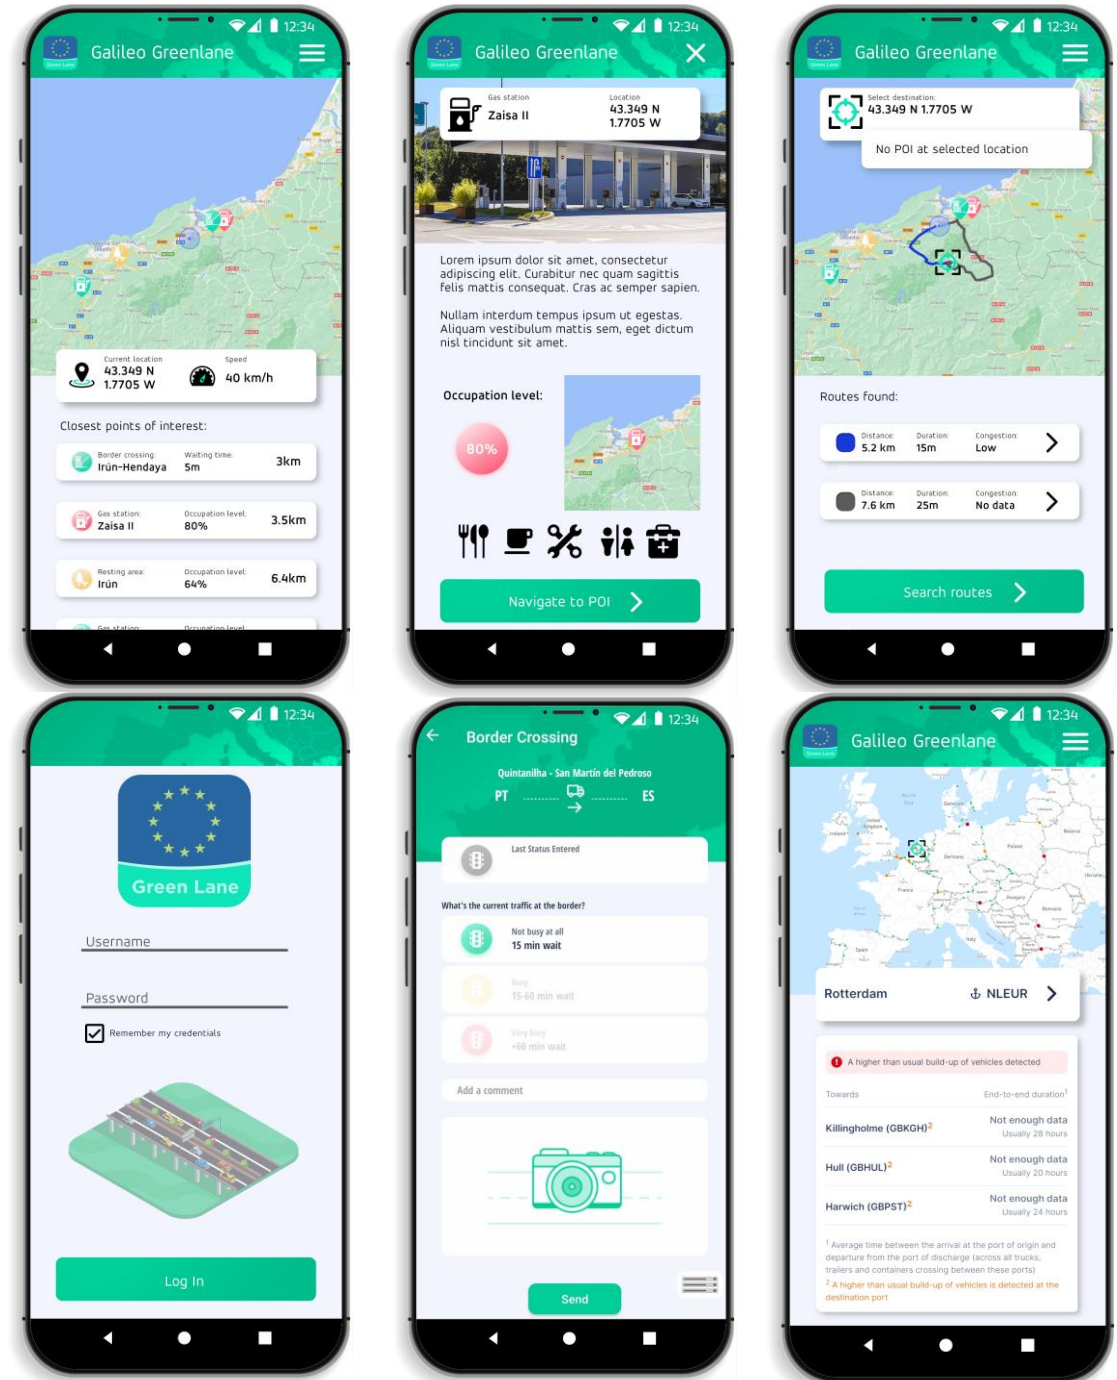

# Mobile applications

- Driver application: informs drivers of border crossings and POI status

- ✓ Anonymous
- ✓ Locates nearby POIs
- ✓ Provides POI details
- ✓ Calculates routes
- ✓ Receives messages from borders
- ✓ Uploads information near borders

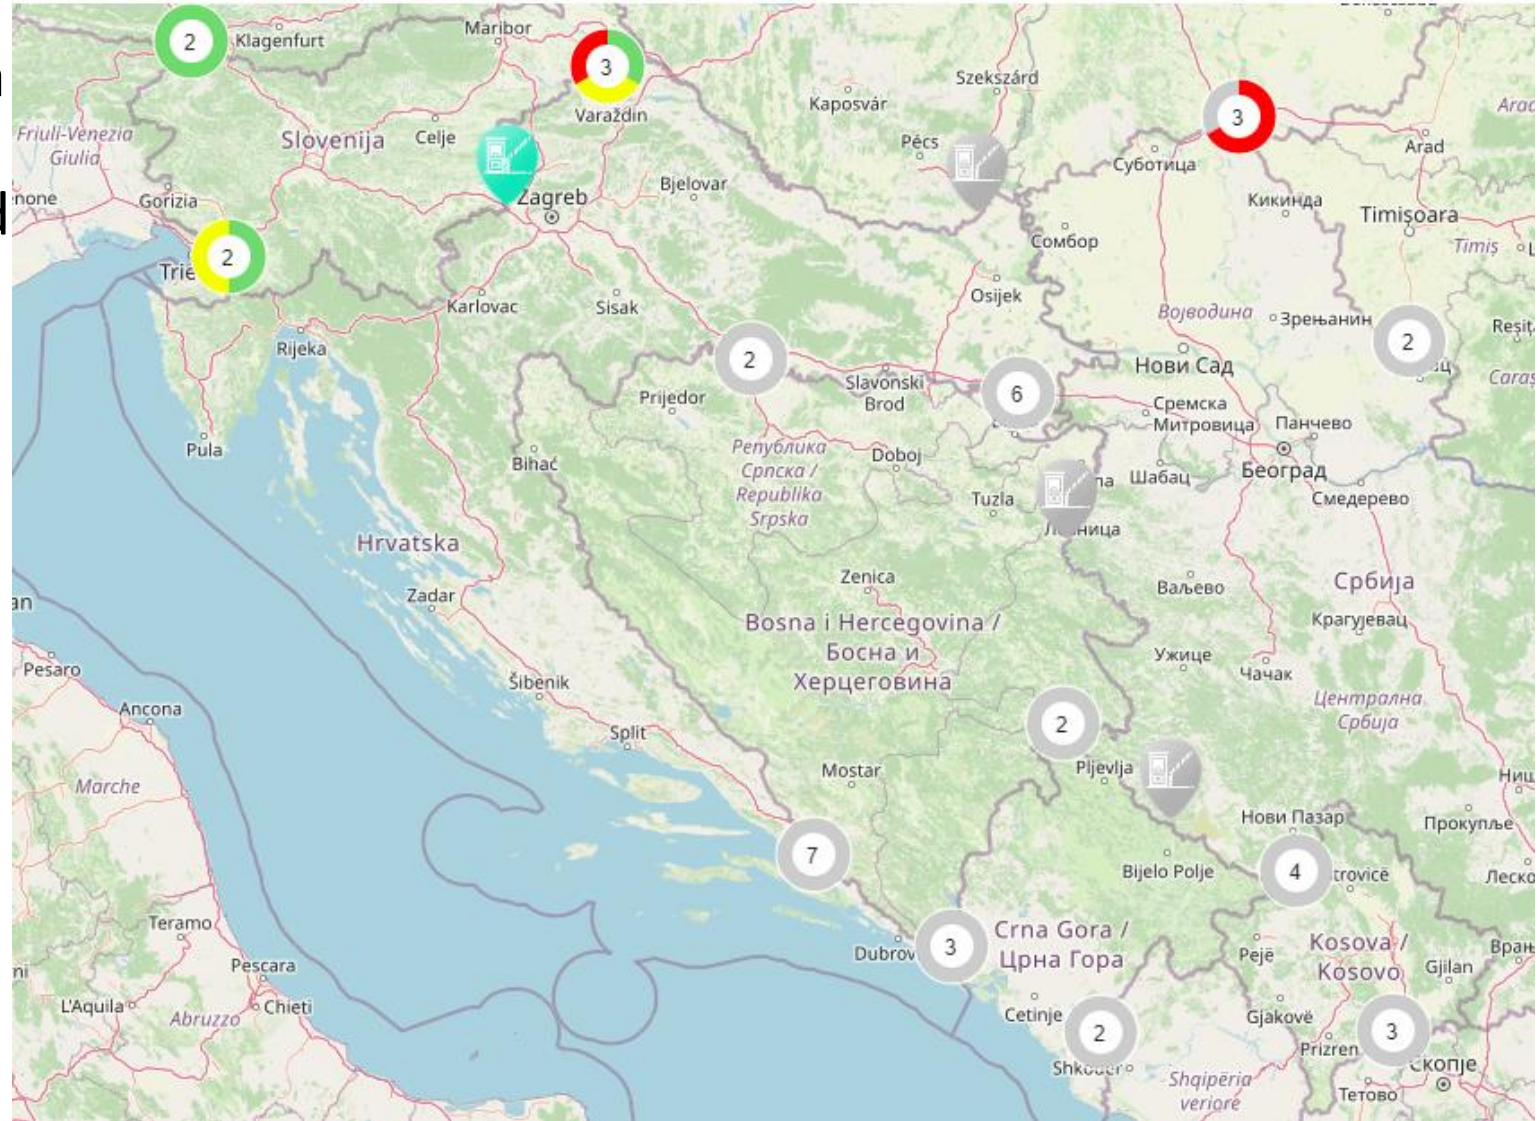

- Enforcer application: separate application for officers at the border

- ✓ Authenticated
- ✓ Updates border crossings delay status
- ✓ Checks border crossing status
- ✓ Sends messages to nearby drivers

# Data acquisition modules

- Integration of heterogeneous data sources from external data sources and provides standardized interfaces
  - ✓ National Access Points / Traffic auth.
  - ✓ Port / Airports / Railway operators
  - ✓ Border management agencies
  - ✓ Open datasets
  - ✓ Highway operators
  - ✓ Transport companies
  - ✓ Traffic data providers

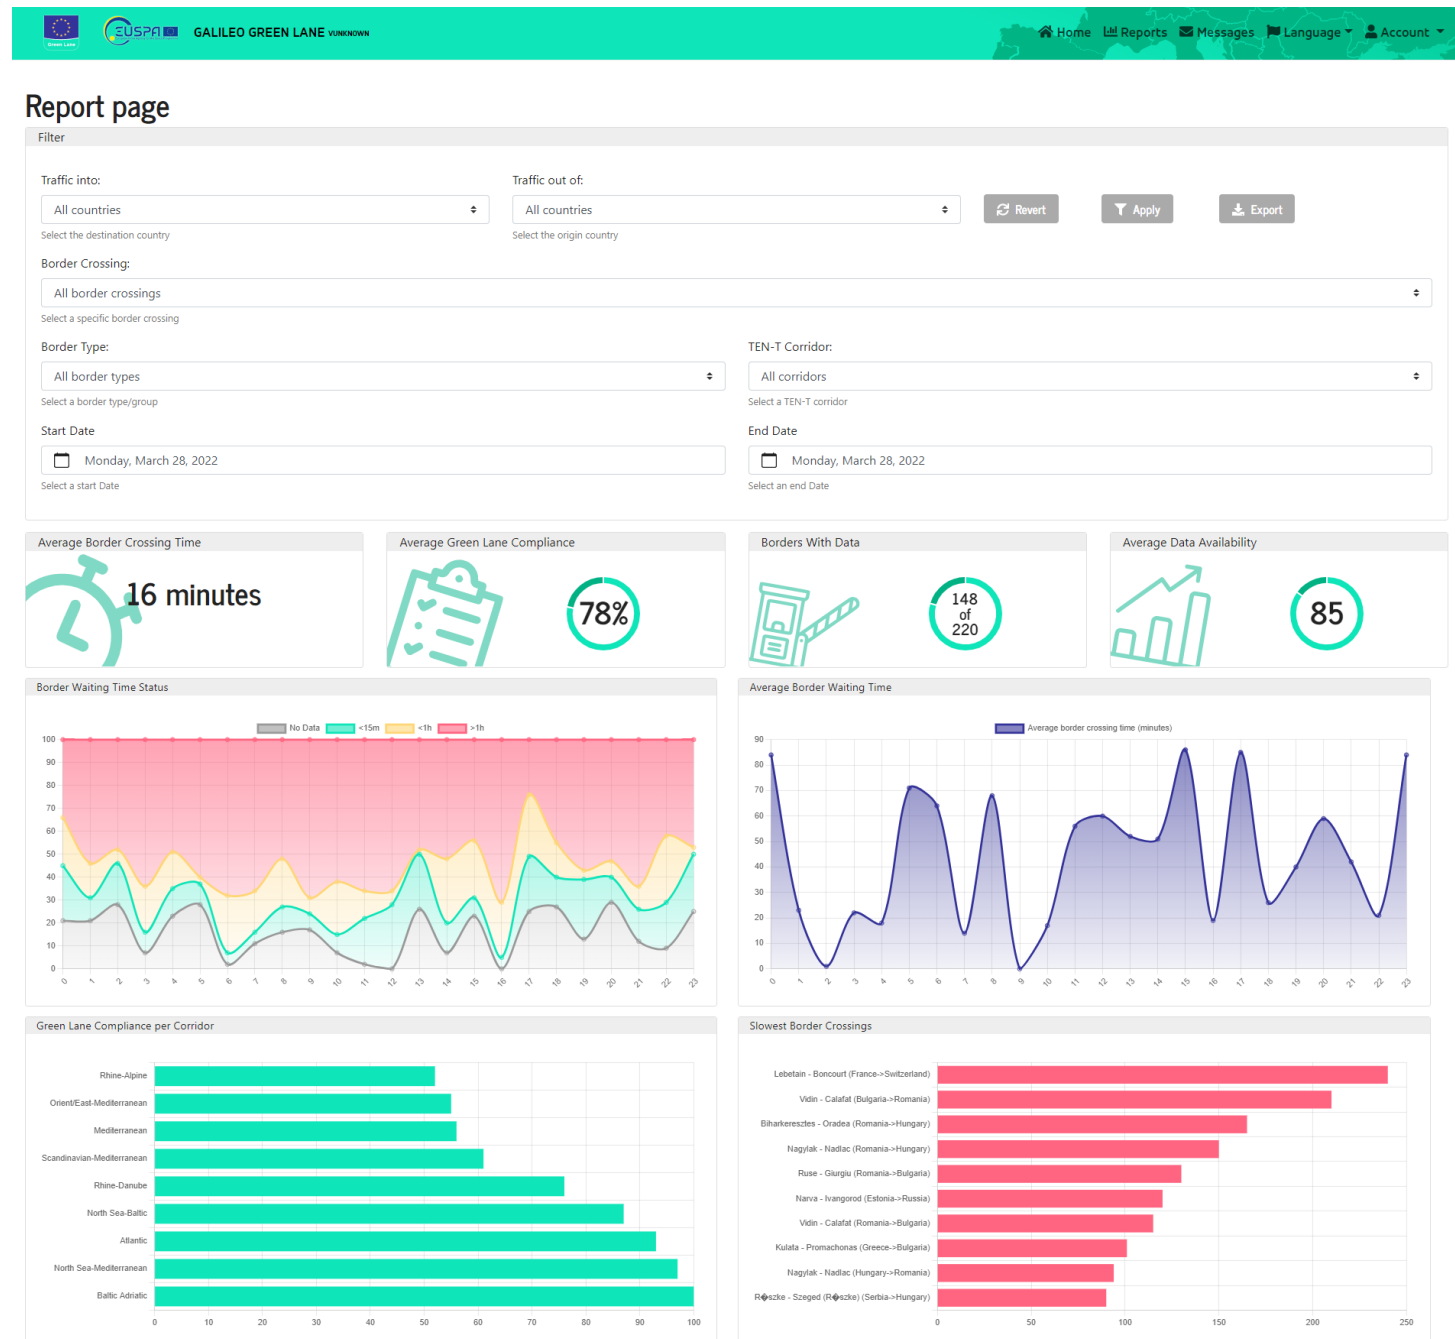

# Web platform/reporting

## ■ Dissemination Website

- ✓ Static HTML + interactive map
- ✓ OpenStreetMaps
- ✓ OGC standards (TBD)
- ✓ Report generation
- ✓ Messaging

## ■ Administrative Website

- ✓ Pure HTML
- ✓ Can be hosted in any server
- ✓ Integrated through JSON REST
- ✓ System settings and POIs / static information monitoring
- ✓ User management

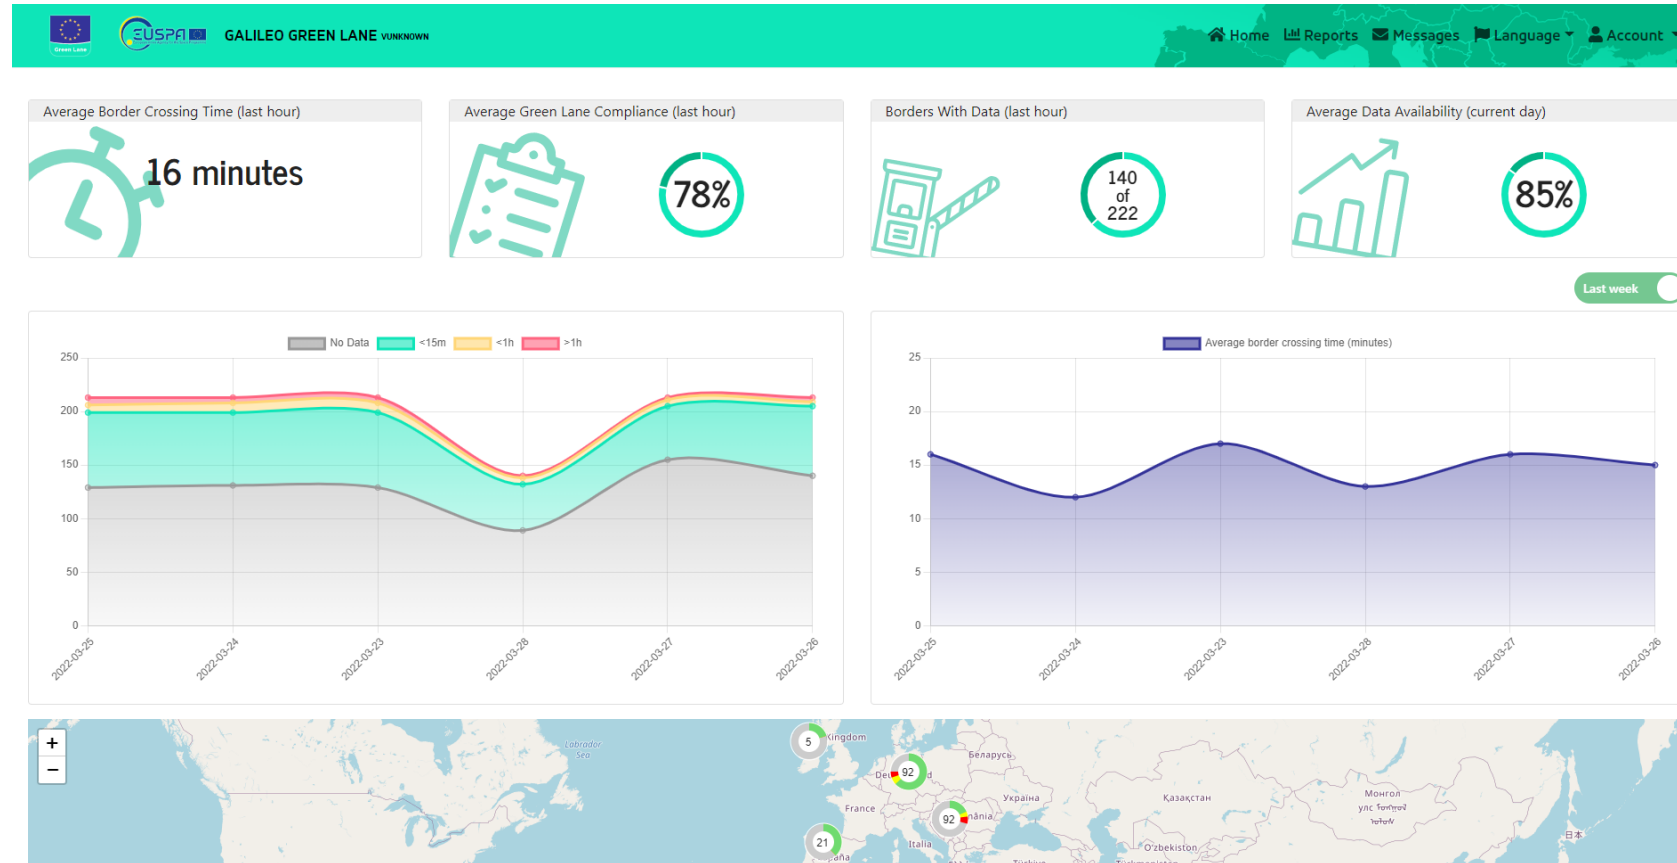

# Web platform/reporting

## ■ Dissemination Website

- ✓ Static HTML + interactive map
- ✓ OpenStreetMaps
- ✓ OGC standards (TBD)
- ✓ Report generation
- ✓ Messaging

## ■ Administrative Website

- ✓ Pure HTML
- ✓ Can be hosted in any server
- ✓ Integrated through JSON REST
- ✓ System settings and POIs / static information monitoring
- ✓ User management

# Pilot testing with potential users

- Very basic pilot testing in basic operational capacity along the Atlantic corridor
  - ✓ Several borders and points of interest for the Transport Community already identified:
    - ⚓ Maritime ports
    - 🚂 Railway Hub
    - ✈️ Cargo Terminal intern. airport
    - 🚧 Border crossings
    - 📦 Logistic Hub
    - P Parking
    - 🛢️ Service stations
  - ✓ Effort reduced in order to increase data sources (Sixfold, HERE, TomTom)
