1

We implement and coordinate tasks related to the Resolution on the National Road Traffic Safety Program and the preparation of action plans to ensure road traffic safety, as presented below.  
We handle tasks related to all national preventive actions.

2

We analyze data on traffic accidents on roads in the Republic of Slovenia. The base for our work is the databases of recorded traffic accidents and their consequences in Slovenia, provided by the police.

In the sector, we also research factors contributing to the occurrence of traffic accidents in the field of road infrastructure.

We organize basic and periodic training for road safety assessors.

We ensure the integration of road safety into the international area and collaborate with international organizations working in the field of traffic safety.
