ROAD SAFETY OBSERVATORY

The Eastern Partnership Road Safety Observatory – Joint Declaration June 2019

- **Countries will work towards the creation of a regional data observatory**
- National Data Coordinators
- Four-year time frame
- Sharing best practice
- **Aim: Improving road safety data quality**

Our overall objective

The Observatory should be a regional resource:

- to advance the reduction of road traffic deaths and injuries
- to help create a solid body of evidence-based approaches
- to support policy development.

ISET POLICY INSTITUTE

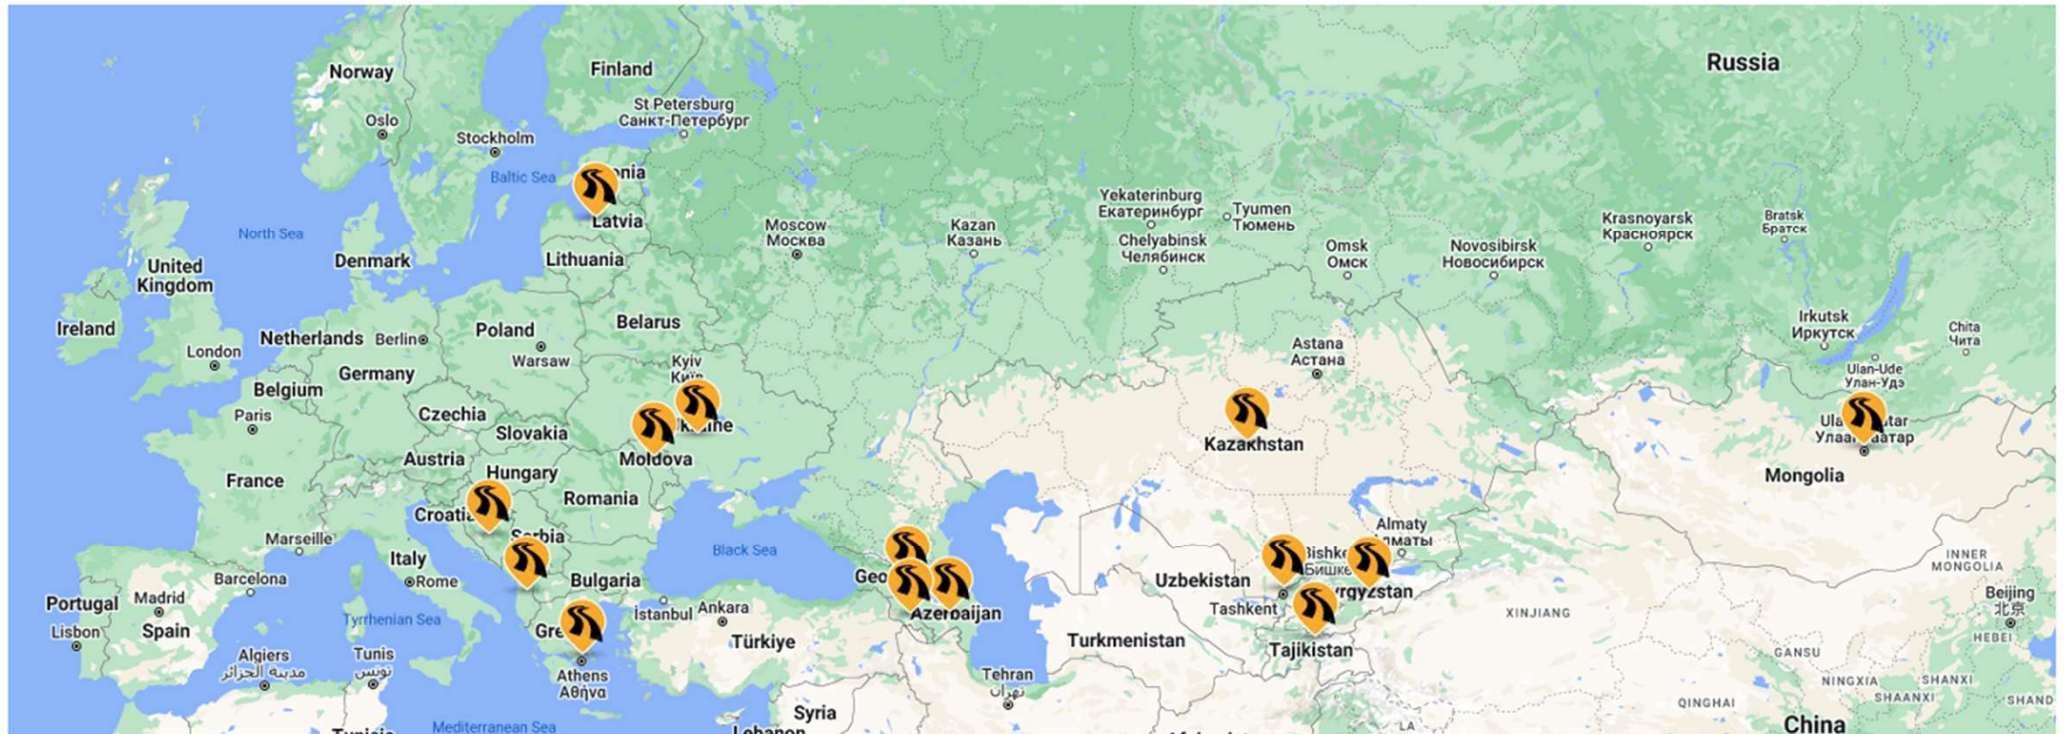

International School of Economics at TSU

- Key areas of expertise are Macroeconomic Policy, Energy & Environment, Private Sector Development, and Inclusive growth.
- ISET maintains a portfolio of regular indices and analytical publications.

Five strategic objectives

Strategic objective 1

Improving capacity for developing and implementing national road safety strategies and actions plans, as well as in collecting, managing and using data.

Strategic objective 2

Data collection across the region allows better comparison based upon **CADaS** and **MiniCADaS** standards and can underpin regional initiatives.

Strategic Objective 3

Data collection methods and technologies improve the timeliness, accuracy, completeness and relevance of data for policy-making.

Strategic objective 4

Road safety data and good practice is communicated to a wide audience to encourage a Safe System Approach and stimulate action to address common challenges.

Strategic Objective 5

Strengthen and develop local capacity on crash data management and analysis, particularly in Georgia's host institutions.

ROAD SAFETY OBSERVATORY

Current priorities

- National strategies
- Data gaps and definitions
- Focus on common concerns

Legislation

The background of the slide features a hand pointing at a hexagonal grid. The grid contains several icons: a globe, a classical building with columns, a group of people, and interlocking gears. The word 'Legislation' is prominently displayed in a large, white, sans-serif font within one of the hexagons.

National Road Safety Strategies

- Armenia – awaiting approval?
- Azerbaijan – expired 2023
- Georgia – strategy ends 2025
- Moldova – expected soon
- Ukraine – strategy expired 2024

Data gaps and definitions

- Each country has gaps in the number of 'Mini-CADaS' data variables collected
- Some data variables are not recorded separately but are grouped with other information
- There are differences in definition – for example functional classification of roads

Common issues with data

Key behaviour risk data

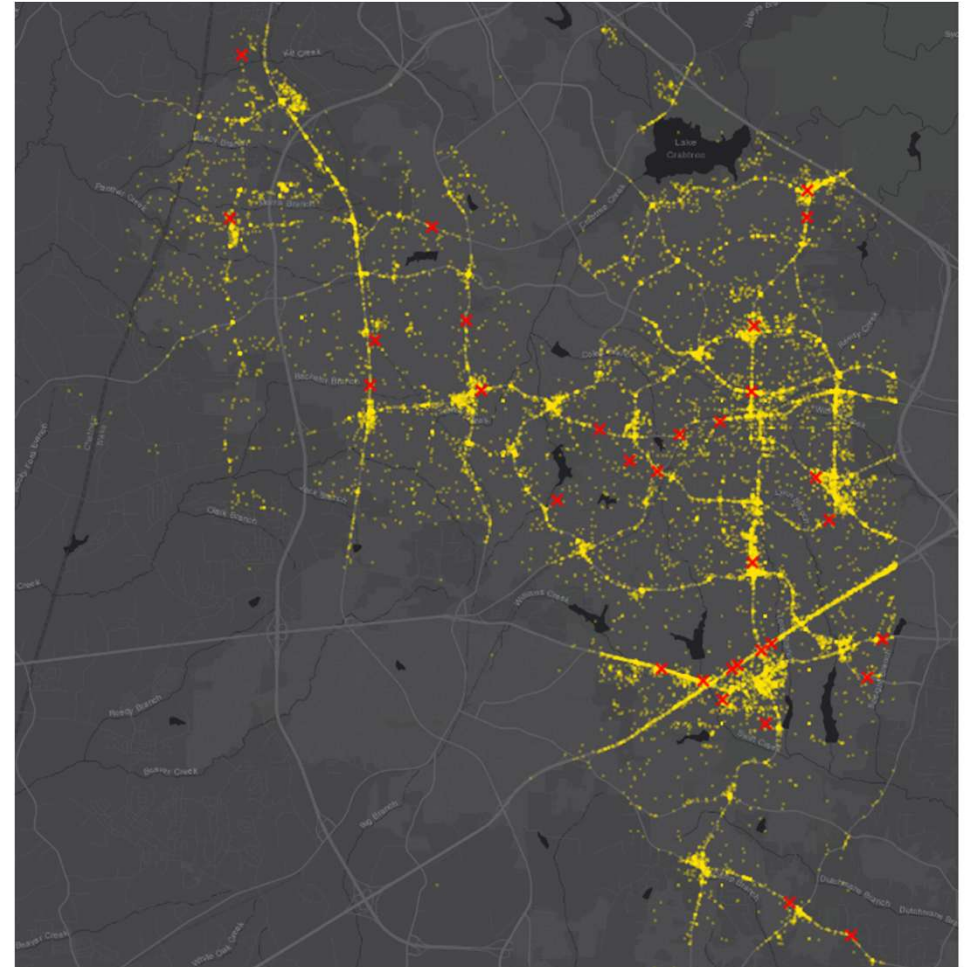

Police crash reporting is not enough.

In the UK, seat belt status in 49% of deaths was recorded as 'unknown' in 2019

Sharing best practices and working with stakeholders

Why sharing data is important
for good policy responses....

Eastern Partnership
ROAD SAFETY

A local example - What caused these crashes?

Young people drinking and
driving after closing time

This pattern was seen in the data
collected and recorded by police
